

Designed for climbers, engineered for safety.

Using a **TRUBLUE** auto belay in your climbing wall facility increases participation while driving down costs and risk. Auto belays benefit all levels of climbers, from the novice getting a feel for the movement to the elite climber focusing on conditioning and training.

The **TRUBLUE** uses a self-regulating magnetic braking system and is engineered to meet the strictest safety standards of all auto belays.

Modular and compact, **TRUBLUE** auto belays are easy to install, move and maintain. Plus, **TRUBLUE** accommodates the widest range of climber weights of all auto belay systems. This makes it ideal for climbing walls used by both children and adults.

ADVANCED TECHNOLOGY

- Reliability with no sacrificial wear parts
- Smooth descent with minimal variation in descent rate of a child and an adult

SAFETY

- Extensive safety testing
- No clutch bearing, eliminating a key point of failure present in other auto belay designs

FLEXIBILITY

- Simple to install and easy to move to accommodate group programming
- Accommodates a wide range of climber weights from 22 – 330 lbs (10 to 150 kg)

MINIMAL MAINTENANCE REQUIREMENTS AND COSTS

- Webbing-based system will not damage walls and feels natural when climbing
- Reduced webbing wear with unique delivery nozzle and field-replaceable webbing kit
- Lower maintenance and servicing costs

|-----------------------|--------------------|
| Universities/Colleges | Recreation Centers |
| Climbing Gyms | Fitness Facilities |
| Amusement Parks | Schools |
| Entertainment Centers | Resorts |
| Camps | Challenge Courses |

WHY USE AN AUTO BELAY?

An auto belay is an automatic belay device that eliminates the need for a human belayer. TRUBLUE uses a patented self-regulating braking system, which is enabled by non-contacting magnetic braking technology. The auto belay takes up slack as the climber ascends and controls the descent when the climber reaches the top or in the event of a fall.

Incorporating auto belays into your facility helps you increase revenue while reducing costs and risk.

WITH THE TRUBLUE AUTO BELAY YOU WILL:

- Increase programming while decreasing staff costs
- Attract single climbers
- Reduce barriers to entry for new climbers
- Provide your members with a unique endurance training tool
- Minimize your facility risk

All auto belays are not created equal...

WHAT YOU WANT IN AN AUTO BELAY	OUR AUTO BELAY	OTHER AUTO BELAYS
Self-regulating non-contacting magnetic system	TRU	False... other auto belays are based on brake pad or hydraulic systems. Brake pad systems have expensive wearing parts, while hydraulic systems have a potential for messy hydraulic fluid leaks and the need to re-pressurize.
Webbing based system	TRU	False... other auto belays are cable-based systems, which can damage climbing walls if the cable contacts the wall.
Low maintenance and servicing costs	TRU	False... annual cable replacement is much more expensive than TRUBLUE's field-replaceable webbing delivery nozzle system. Plus, site visit servicing for fixed auto belay systems can well exceed the cost of our annual offsite servicing.
Smooth descent	TRU	False... other auto belays are not self-regulating and the descent rate can vary according to climber weight
